Mr. Steve Powell  
Castle Rock Manufacturing.  
P.O. Box 957  
Price, Utah 84501

Dear Mr. Powell:

Our records indicate that the mineral material contract you entered into for the purchase of 1,500 tons of limestone from our Kyune Community Pit serialized U-75748, located in Section 33, T. 11 S., 9 E., on June 2, 2006, expired as of June 2, 2007.

A member of my staff conducted an inspection during this past summer and noted that the stockpiles had been removed, but that final reclamation hasn't been completed. As per #7 of "Exhibit B" of your contract stipulations;

At the termination of mineral extraction operations, the pit area must be graded so that the finished surface blends with the line and form of the surrounding topography. The access road must be ripped along its entire length. The stockpiled topsoil will then be spread evenly over the surface of the pit and along the length of the access road and left in a "roughed-up" condition to enhance the ability of the soil to capture and retain moisture. To ensure adequate revegetation success, the reclamation bond shall not be released for a period of one to two years after reclamation has been completed. To help deter off-highway vehicle traffic while re-establishing vegetation in the reclaimed project areas, markers or signs shall be placed around the perimeter of the reclaimed sites.

I understand that due to weather conditions during the winter months, it may not be possible to conduct reclamation activities, but once conditions permit we would expect you to complete the earthwork portion of the reclamation. Seeding would be done in the late fall with the seed mix specified in #9 of "Exhibit B".

Please contact Larry Garahana of my staff at (801) 977-4371 within 30 days from the receipt of this letter to coordinate the reclamation activities needed to complete your contract obligations or to answer any questions or concerns you may have.

Sincerely,

David H Murphy  
Assistant Field Manager  
Nonrenewable Resources
